$GIVEAWAY: The Meritocratic Reward Engine

Official White Paper v2.0 (Feb 2026)

1. Executive Summary

$GIVEAWAY is a dual-phase Social-Fi enterprise on Solana. We replace luck-based lotteries with an AI-governed meritocracy. By seeding V2 through V1 transactional volume, we ensure a "no-dump" launch while rewarding the earliest believers through a unique "V1 Loyalty Value" transfer.

2. Phase 1: The "Seed" (V1 - Current)

Platform: Pump.fun.

Mechanism: 100% of all Creator Fees are sequestered into a public multisig.

Launch Milestone: 12 SOL.

Zero Giveaways: No rewards are distributed during Phase 1. Every penny of profit is reserved to fuel the V2 Liquidity Pool and the "Loyalty Value" transfer.

3. The "V1 to V2" Loyalty Handshake

We reward early believers who hold V1 through the migration.

Value Parity: V1 holders will receive an airdrop of V2 tokens of equivalent dollar value to their V1 bags.

The "Believer's Bonus": Tokens are valued at 6% below the V2 launch price, giving holders an immediate "paper gain."

Vesting Schedule: To ensure chart stability, these tokens are released over 10 weeks (10% released weekly).

4. Phase 2: The "Machine" (V2)

V2 utilizes Token-2022 Extensions on Raydium with a 1% Buy / 5% Sell tax collected natively in SOL.

4.1 The Bi-Weekly Giveaway Pulse

Giveaways occur twice per week (e.g., Monday and Thursday). Each cycle features 9 total winners:
